

Double Barrel — *vehicle QR decal*

Story QR beneath Cornie's existing badge logo • pickup + Jeep • at least 4 decals

SCAN OUR STORY

WORTH THE DRIVE

DOUBLEBARRELSTEAKHOUSE.COM/STORY

Suggested lockup — Sign Pro may set the type in Double Barrel's existing decal style.

What this is

One unified decal: Cornie's existing badge logo with a QR plate hanging beneath it. A phone camera scans it and lands on a short **story page** — who Double Barrel is, the mounts, why folks drive 60 miles — with links to the full site, directions, and tap-to-call. Built for strangers who see the truck far from home.

PRINT SPECIFICATIONS

ENCODES	https://doublebarrelsteakhouse.com/story/
ERROR CORRECTION	High (H) — scans even if ~30% is scratched or road-dirty
MIN. PRINTED SIZE	1.5 in square of code minimum on a vehicle (2–3 in preferred for scan-from-a-few-feet)
QUIET ZONE	Keep the clear margin around the code — do not crop into it or place text inside it
COLOR	Dark #3B2314 (Double Barrel wood) on light/cream. Pure black on white is also fine. Must stay dark-on-light for the scan to work.
FILES SUPPLIED	Vector SVG (scales to any size, no blur) — transparent and cream-background versions, plus a PNG proof

TIMING — DO NOT APPLY TO THE VEHICLES YET

The code points at doublebarrelsteakhouse.com/story/, which goes live with the new site (target: before Oct 1). **Print is fine anytime; apply the decals only once Zach confirms the site is live at that address** — otherwise an early scan hits nothing. Zach will give the green light.

QUANTITY & LAYOUT

At least 4 decals — pickup truck + Jeep (confirm if a third vehicle). Same artwork on all. The code is identical everywhere, so one file prints the whole set. Sign Pro sets final size and placement to match each vehicle's existing graphics.

- **db-badge-qr-unified.svg** — THE decal: badge + hanging QR plate, one contour-cut piece, transparent background
- **db-qr-only.svg / db-qr-cream.svg** — the code alone, if Sign Pro prefers to re-set the plate in their own type
- **db-qr-preview.png** — proof image for a quick test-scan
